

Fact Sheet Wisconsin Fire Service Needs Assessment

There has been substantial progress in reducing many fire department needs, although more remains to be done.

Protective Equipment and Clothing

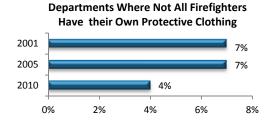

The 2010 percentage of Wisconsin departments without enough equipment to equip all personnel (or all personnel on a shift, as appropriate) was:

▶ 65% for self-contained breathing apparatus (SCBA), compared to 80% in 2001 and 64% in 2005;

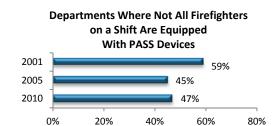

Departments Where Not All Firefighters on a Shift Are Equipped with SCBA

2001
2005
2010
64%
2010
65%
100%

➤ 4% for **personal protective clothing**, compared to 7% in 2001 and 7% in 2005; and

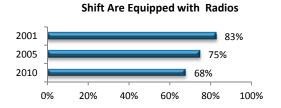

47% for personal alert safety system devices (PASS), compared to 59% in 2001 and 45% in 2005;

▶ 68% for portable radios, compared to 83% in 2001 and 75% in 2005.

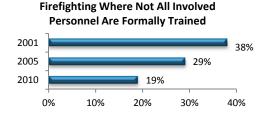

Departments Where Not All Firefighters on a

Training

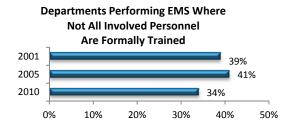

In many fire departments, **not all involved personnel have been formally trained** in their emergency response duties. The 2010 percentage of Wisconsin departments in which not all involved personnel have been formally trained was:

> 19% for **structural firefighting**, compared to 38% in 2001 and 29% in 2005; and

Departments Performing Structural

> 34% for emergency medical service (EMS), compared to 39% in 2001 and 41% in 2005.

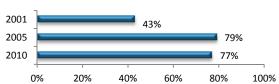

Fitness and Health

In many fire departments, there is no program to maintain basic firefighter fitness and health.

The 2010 percentage of Wisconsin departments with no such program was:

> 77%, compared to 43% in 2001 and 79% in 2005.

Unusually Challenging Incidents

There has been little or no progress in increasing the ability of fire departments to handle **various unusually challenging incidents** with local trained personnel and specialized equipment alone:

- Provide technical rescue and EMS at a structural collapse involving 50 occupants; and
- Provide hazardous material response and EMS at an incident involving chemical or biological agents and with 10 injuries.
- Wildland/urban interface (WUI) fire affecting 500 acres: and
- > Mitigation of a major developing flood.

However, there has been progress in the percentage of departments having written agreements for working with others. The 2010 percentage of Wisconsin departments with *no* such written agreement was:

- > 55% for structural collapse, compared to 64% in 2001 and 57% in 2005;
- ➤ 49% for chemical or biological incidents, compared to 84% in 2001 and 51% in 2005;
- > 35% for wildland/urban interface fires, compared to 36% in 2001 and 38% in 2005; and
- ➤ 43% for developing major flood, compared to 67% in 2001 and 54% in 2005.

Success requires more written agreements, with each participating department knowing its role, providing resources needed to play its role, and helping test the plan in simulations and rehearsals.

Stations and Apparatus

Some stations lack specific features, which are required by current standards but were not required when stations were constructed. Some stations are old enough that a variety of persistent or recurring problems are to be expected and replacement might be better and even cheaper. Some departments are using old fire apparatus.

- > 37% of Wisconsin fire departments do not have backup power for their fire stations.
- ➤ 43% of Wisconsin fire departments do not have exhaust emission control for their fire stations.
- > 44% of the fire stations in Wisconsin are over 40 years old.
- > 7% of Wisconsin fire department engines and pumpers are at least 30 years old.

Cautions on interpretation

Trends. For some states and most needs assessment survey questions, even large changes from one survey to another will not be statistically significant. Be cautious in interpreting results as trends.

State-to-state comparisons. States where a large share of departments serve small communities will tend to have greater needs according to the measures used here than states where a small share of departments serve small communities. State-to-state comparisons must be viewed with caution, particularly if the states have very different mixes of urban and rural communities.

How rural is Wisconsin? The survey for Wisconsin was based on the following responses:

- 24 of the 33 departments protecting populations of 25,000 or more;
- ➤ 32 of the 85 departments protecting populations of 10,000 to 24,999; and
 - 149 of the 682 departments protecting populations of less than 10,000.
